Contents

CHAPTER I Perceptual Ordering of Apparent Brightness	1
Radiant Energy	2
Photometric Concepts	2
Psychophysical Scaling Functions	6
Comparison of Alternative Formulations	16
CHAPTER II Absolute Threshold of Vision	20
Absolute Sensitivity	21
Experimental Measurement of Absolute Visual Threshold	22
Experimental Data	29
Minimal Radiant Energy Necessary to Excite a Visual Response; Quantum Measures; Stimulus Variability	38
Organism Variability	39

CHAPTER III Sensitivity to Brightness Differences	43
Variables that Influence Brightness Discrimination	43
Brightness Difference Thresholds	45
CHAPTER IV Temporal Aspects of Brightness Perception	61
Dependence on Adaptation Level	61
Dependence on Luminance Level; Steady-State Condition	64
Brightness Changes before Steady State Is Reached	66
Fixed Retinal Images	68
Action-Reaction Dual Process	70
Brightness Changes During Very Short Exposures	74
Brightness Enhancement	76
CHAPTER V Contrast and Assimilation	84
Simultaneous Contrast	85
The Gelb Effect	86
Shadow and Spot Effects	86
Quantitative Experiments	88
Role of Contrast Mechanism	99
Role of Memory, Experience, and Interpretation	102
Gelb Effect Reconsidered	105
Summation and Averaging Effects	108

Assimilation Phenomena	109
Spatial and Temporal Variables Act in Similar Manner	111
CHAPTER VI Brightness Constancy	113
Brightness Constancy Example	113
Conceptual Schemas	120
Experiments	123
Factors Contributing to Approximate Brightness Constancy	130
Photochemistry and Neurophysiology	134
Index	137

Index

- Absolute (sensitivity) 21-22
Absolute visual threshold, measurement of, 22-41
 dark adaptation, 24-25
 experimental data, 29-38
 exposure time, 27-28, 32-34
 intensity control, 22-24
 location of stimulus, 25-26, 29-30
 method, 28-29
 organism variability, 39-41
 size of stimulus, 26-27, 30-32
 variability of stimulus, 38-39
 wavelength, 35-37
Action-reaction dual process, 18,
 71-74, 82, 96, 134
 afterimages, 73-74
 contrast phenomena, 96
 image stabilization, 72-73
Adams, E. Q., 12, 14
Adaptation-level, 11, 14, 37, 45, 50-
 51
 and brightness perception, 61-64,
 66-68, 131
 successive, 131-132
Afterimages, 73-74, 132
Albedo, 115
Alpha rhythm, 79
Ambiguity and perception, 102-
 105
 instructions to observer, 104-105
 knowledge of illumination,
 105-106
Anatomical shadow-casters, 69
Aperture mode, 121
Approximate brightness constancy,
 factors in, 130-134
 adaptation level, 131
 induction, 132-133
 pupil size, 130-131
Asher, H., 22
Assimilation, 109-111
 Bezold spreading effect, 109-110
 Helson and Rohles experiment,
 110-111
Aubert, H., 57
Availability, principle of, 53-55
Bartley, S. H., 76, 79, 80
Baumgardt, E., 75, 76, 80-81
Beck, J., 103
Bezold, W. von, 110
Bezold spreading effect, 109-110
Bidwell, S., 81
Binocular stimulation, 34-35
 and brightness sensitivity, 55-57,
 63
 and contrast phenomena, 93
Biological variability, 39-41
Bloch's law, 32, 50, 53
Brightness constancy:
 approximate, 114, 130-134
 Brunswik ratio, 116-117
 conceptual schemas, 120-123
 example of, 113-121

- Brightness constancy (*Cont.*)
 experiments, 123-130
 measures of, 116
 Thouless ratio, 117
- Brightness discrimination:
 difference thresholds, 45-59
 and adaptation, 50-51
 brightness difference sensitivity, 48
 glare, 51-53
 luminance, 45-48
 monocular vs. binocular viewing, 55-57
 principle of availability, 53-55
 psychophysical laws, 57-59
 relative discriminability, 48-49
 variables in, 49-50
 temporal aspects of, 61-82
 action-reaction dual process, 71-74
 adaptation level, 61-62
 brightness enhancement, 76-82
 changes before steady state, 66-68
 fixed retinal images, 68-70
 luminance level, 64-66
 on short exposures, 74-76
 variables in, 43-45
 adaptation level, 45
 illumination, 44-45
 reflectivity, 43-44
- Brightness enhancement, 76-82
 Baumgardt-Segal hypothesis, 80-81
 Brücke-Bartley effect, 79-80
 flicker fusion, 76-78
 metacontrast, 81-82
 Talbot's law, 78-79
- Broca, A., 74-75, 76, 80
 Brücke, E., 76, 79
 Brunswik, E., 116
 Brunswik ratio, 116-117, 118, 119, 120, 128
 Bunsen-Roscoe law, 28, 32
- Candle, as unit of luminous intensity, 3, 36
 Category scales, 10-13
 Cobb, P. W., 12, 14
 Cognitive factors in perception, 87-88, 95-96
 Cones, 29-30, 37
- Constancy ratios, 116-117
 Contrast, simultaneous, 85-108
 Gelb effect, 105-108
 mechanisms of, 99-102
 memory, experience and interpretation, 102-105
 neural interactions, 85
 quantitative experiments, 88-89
 Contrast darkening, and glare, 52-53
 Craik, K. J. W., 64-66, 131
 Crawford, B. H., 6
- Dark adaptation, 24-25
 and the Purkinje effect, 37
 Difference threshold, for brightness, 45-59
 Discriminability scales, 7-9
 Ditchburn, R. W., 73
 Duplicity (duplexity) theory, 29-30
- Einstein, A., 39
 Episcotister, 23, 123
 Evans, R. M., 103, 104, 110
 Excitation-inhibition, 80
 Experience, and perception, 122
- Facilitation, 80
 Fechner, G. T., 57
 Fechner's law, 7, 9, 12, 14, 15, 16, 17, 58-59, 117
 Fechner's paradox, 55, 56, 58
 Ferry-Porter law, 77
 Fixed retinal images, 68-72
 anatomical shadow-casters, 69
 fixation, 68-69
 Flicker fusion experiments, 76-78
 Fovea, 26, 29-30, 49-50
 Fractionation scales, 13-14
- Ganzfeld*, 69-70, 72
 Gelb effect, 86-87
 reconsidered, 105-108
 Gibson, J. J., 122
 Glare, and brightness discrimination, 51-53
 contrast darkening, 52-53
 scattered light, 51-52

- Haploscopic experiments, 63-64,
67, 89, 101-102
- Hecht, S., 38
- Helmholtz, H., 87-88, 120-122
- Helson, H., 10, 11-12, 14, 110-111,
120
- Hering, E., 52, 59, 70, 76, 87, 88,
102, 120, 122, 132
- Hess, C., 91-95, 103-104, 124
- Hess and Pretori apparatus, 91-93,
103, 124.
findings through use of, 94-95,
124, 126
- Hochberg, J. E., 70, 103
- Human eye, image formation by,
99-100 (*see also* Cones;
Fovea; Retina; Rods)
- Illuminance, 4, 6, 115
- (Illumination,) Helmholtz on, 121-
122
- Image stabilization, 72
- Inducing area, size of, 95
- Induction:
simultaneous opponent, 133-134
successive, 132-133
- Intrinsic light (*see* Light chaos)
- (Irradiance,) 2
- Judd, D. B., 16-17, 117, 120
- Katz, D., 120-121
- Köhler, W., 122
- König, A., 9
- Leibowitz, H., 102
- Light chaos, 20, 39-40
- Light intensity, control of, 22-24
- Light units, 2-6, 36
- Livshitz, N. N., 57
- Logarithmic relationship in bright-
ness scales:
challenged, 14-15, 16
modified, 17
proposed, 9, 12
- Lumen, 3
- (Luminance,) and brightness difference thresh-
olds, 45-49, 53
defined, 3
and flicker fusion, 77
representative values of, 4
and steady-state condition, 64-66
units of, 36, 128-129
- Luminance gradient, 108
- Luminosity functions, 36-37
- Luminous flux, 3
- Mach rings, 96-100, 108, 111, 134
- Macular pigment, 69
- Magnitude scales, 14-15, 128, 129
- Memory, role of, 102
- Memory color, 122
- Mesopic vision, 37
- Metacontrast, 81-82
- Michels, W. C., 10, 11, 12
- Millilambert, 4, 36
- Monocular stimulation, 34-35
and brightness sensitivity, 55-57,
63
- Mote, F. A., 102
- Munsell, A. H., 17, 120
- (Neurophysiology,) 134
- Newhall, S. M., 12-13, 117, 120
- Nickerson, D., 117, 120
- Observer's set, 40, 41, 102-105
- Organism variability, 39-41
- Overconstancy, 119, 128
- Perceptual scales (*see* Psycho-
physical scaling functions)
- (Photochemistry,) 134
- Photometric concepts, 2-6, 36
and psychological units, 8
relations among, 5
- Photopic vision, 30, 35-37

- Piéron, H., 32
 Pigments, matching by, 105
 Piper's law, 30-32, 34
 Pirenne, M. H., 38
 Pointillist technique, 108-109
 Polaroid filters, 23
 Power function in brightness scales,
 14-15, 17
 Pretori, H., 91-95, 103, 124
 Prisms, 23
 Psychophysical scaling functions:
 and brightness difference thresh-
 olds, 57-59
 category scales, 10-13
 comparison of, 16-18
 discriminability scales, 7-9
 Fechner's law, 9
 fractionation scales, 13-14
 magnitude scales, 14-15
 Pupil size, 130-131
 Purkinje shift, 35, 37, 45
- Quantum measures, 38-39
- Radiance, 2
 Radiant emittance, 2
 Radiant energy, 2, 36
 minimum required for visual re-
 sponse, 38-39
 Radiant flux, 2, 3
 Radiometric concepts, 2
 Receptors of human eye, 29-30
 Reflectance, 115-117, 120
 Helmholtz on, 122
 Retina, anatomical structure of, 29-
 30, 99-100
 Retinal illuminance, 6
 Retinal light, 20
 Ricco's law, 30-31
 Riggs, L. A., 73
 Rods, 29-30, 35, 37, 39
 Rohles, F., 110
- Segal, J., 75, 76, 80-81
 Shadow and spot effects, 86-88
 Shlaer, S., 38
 Signal detection, 40
 Simultaneous opponent induction,
 133-134
 Spatial interaction, and brightness
 perception, 84-112
 assimilation, 109-111
 contrast, 85-108
 summation, 108-109
 Spectral sensitivity, and wave-
 length, 35, 36
 Stainton, W. H., 81
 Steady state:
 brightness changes before, 66-68
 and luminance level, 64-66
 Steradian, 2, 36
 Stevens, S. S., 14-15
 Stewart, E. C., 106-108
 Stiles, W. S., 6
 Stimulus:
 for brightness difference thresh-
 old, 49-50
 duration of, 27-28, 32-34, 50, 61
 intensity of, 37, 45
 location of, 25-26, 29-30
 monocular vs. binocular, 34-35
 size of, 26-27, 30-32
 variability of, 38-39
 Successive adaptation, 131-132
 Successive induction, 132-133
 Sulzer, D., 74-75, 76, 80
 Summation:
 and averaging effects, 108-109
 and binocular stimulation, 34-35
 spatial, 30-32, 33
 temporal, 32-34
 Surface mode, 121
 Surround, and brightness discrimi-
 nability, 50-51, 85 (*see also*
 Glare)
- Talbot's law, 78-79
 Temporal aspects of brightness
 discrimination, 61-82
 action-reaction dual process, 71-
 74
 adaptation level, 61-62
- Scattered light, and glare, 51-52
 Schlosberg, H., 106, 117-118
 Schrödinger, E., 57
 Scotopic vision, 30, 35-37
 Seaman, G., 70

- Temporal aspects of brightness
discrimination (*Cont.*)
 brightness enhancement, 76-82
 changes before steady state, 66-
 68
 fixed retinal images, 68-70
 and luminance level, 64-66
 on short exposures, 74-76
 and spatial aspects, 111
- Thouless, R. H., 117
- Thouless ratio, 116, 117, 119, 120,
 128
- Thurlow, W. R., 102
- Triebel, W., 70
- Troland, 6
- Wallach, H., 122-124
- Watt, as unit of radiant energy, 2,
 36
- Wavelength, 35-37, 50
- Weber's law, 46-48, 58, 59, 77
- Wedges, neutral density, 23
- Woodworth, R. S., 106, 117-118
